**AUTO SAFETY HOUSE ADDS THE GRAND ROCK PATENTED QP (QUIET PERFORMANCE) MUFFLER TO SUSTAINABILITY PRODUCTS FOR FLEETS**

PHOENIX, AZ, February 20, 2009 – Auto Safety House (ASH) has added the Grand Rock QP (Quiet Performance) muffler to its list of “Sustainability Products for Fleets” offerings. The QP Muffler is very different than other low backpressure mufflers on the market - the QP Muffler accelerates exhaust flow as the gases travel through, also known as "scavenging". Since diesel engines dislike exhaust backpressure, they perform better with a QP Muffler than with other more conventional muffler designs. Grand Rock reports that astounding results have already been observed on applications that incorporate long sections of exhaust pipe - specifically School Buses. Grand Rock guarantees a minimum of 3% fuel mileage gain on electronically controlled motors.

“The patented technology associated with this new product is but one more “Sustainability for Fleets” product and service solution that will help support our fleet customers in their sustainability and cost cutting efforts. The technology used in the QP muffler is designed to achieve better fuel mileage, lower exhaust temperature, more horsepower and higher torque. It’s important to note that this muffler is not an emissions improvement device, but rather an exhaust flow accelerating device. Fulfilling the needs of our fleet customers is one of our central goals. When any product we provide, enables customers to benefit through cost savings and achieve their own sustainability objectives, then we know that we have a winning combination that truly benefits us all.” commented Rudy Garcia – Vice President of Sales & Marketing for Auto Safety House.

The new QP (Quiet Performance) Replacement Muffler

Auto Safety House is a fleet solutions provider and distributor of new and used buses, truck equipment, bus, truck and trailer parts, and also performs emergency vehicle modifications, and offers a diverse mix of heavy duty mechanical service in facilities located throughout the Southwestern United States.
